

BitDefender Corporate Security

Protect your business from malware threats

BitDefender Corporate Security secures business servers (file, mail, ISA and SharePoint) and workstations against the sophisticated threats of newly emerging malware and attempts to steal confidential and valuable data.

This package brings together a set of integrated security solutions which help Small and Medium Businesses comply with data security regulations without putting a strain on limited IT budgets and human resources.

Key benefits:

- Low administrator workload and administration costs;
- Increased productivity;
- Integrated security for corporate computer users;
- Safe sharing of files and documents;
- Safe Internet traffic;
- Reduced mail traffic;
- E-mail protection against a wide range of malware;
- Ease of use and management;
- High stability;
- Low resource/network impact;
- Free 24/7 technical support.

Key features:

- Antivirus, firewall, antispam and antispyware protection for corporate computer users;
- Support for WMI administration tasks and Windows update management;
- Proactive heuristic protection against zero-day threats;
- Centralized management support for all BitDefender products on Windows platforms;
- Superior antivirus and antispyware* protection for file servers;
- Multiple layers of antispam filters;
- Scans and filters both HTTP and FTP traffic against viruses and spyware;
- Complies with all major Linux distributions (for Unix products).

BitDefender advanced technologies:

 All BitDefender products include B-HAVE, a patent pending technology which analyzes the behavior of potentially malicious codes, inside a virtual computer, eliminating false positives and significantly increasing detection rates for new and unknown malware.

Image Spam Filter

BitDefender offers a more accurate image filter which, instead of analyzing the text within image spam messages, learns the common characteristics of those images in point of color content and proportions. The result: less false positives and lower spam traffic.

 To better deal with new spam, the BitDefender Lab has created NeuNet, a powerful antispam filter. Inside the Antispam Lab, NeuNet is pre-trained on a series of spam messages so that it learns to recognize new spam by perceiving its similarities with the messages it has already examined.

Certified Antivirus Engines

BitDefender's award winning scan engines featuring the B-HAVE technology have been recognized to provide the most proactive antivirus protection available by ICSA Labs, Virus Bulletin and Checkmark.

BitDefender Corporate Security includes the following

BitDefender Client Security

Integrates BitDefender Enterprise Manager and BitDefender Professional Plus Client into one seamless security solution.

BitDefender Enterprise Manager enables the full automation of routine tasks and it allows the administrator to safely manage clients and tasks from anywhere in the network.

BitDefender Professional Plus Client integrates antivirus, firewall, antispam and antispyware modules into one comprehensive workstation security package.

BitDefender Security for File Servers

Protects Windows-based file servers, minimizing administration efforts. Reliable and easy to use, it targets both small and large organizations.

BitDefender Security for Samba

BitDefender Security for Samba protects Samba network shares against both known and unknown virus and spyware threats. This is the best choice for your favorite Unix-based system as its open source vfs module can be compiled against any Samba version.

BitDefender Security for Exchange

BitDefender Security for Exchange provides antivirus, antispyware, antispam, antiphishing, content and attachment filtering engines seamlessly integrated with the MS Exchange Servers, creating a completely clean Exchange environment.

BitDefender Security for Mail Servers

Designed for mail servers running on Windows or UNIX based platforms, BitDefender Security for Mail Servers combines advanced antivirus technologies with content and antispam filters to provide safe mail traffic to companies and Service Providers. The product is compatible with the majority of existing e-mail platforms.

BitDefender Security for ISA Servers

BitDefender Security for ISA Servers offers antivirus and antispyware protection for web traffic, including protection for data received through webmail.

BitDefender Security for SharePoint

BitDefender Security for SharePoint provides antivirus protection for your SharePoint Server.

Services

Hourly Updates

Virus definitions are automatically updated 24 times a day without user intervention, directly from the BitDefender servers or from approved mirror sites, ensuring a swift and effective reaction.

Upgrades

Registered users benefit from free upgrades to any new version of the product during the license period. Special price offers are also available to returning customers.

Free 24/7 Professional Technical Support

Certified representatives provide BitDefender business customers with free permanent support online, by telephone or e-mail.

* Only for Samba File Server
